2010 Windows 7 Blog #1: Microsoft making large-scale changes to Windows 7 Windows 7 has had a lot of hype surrounding it, as well as an amount of excitement and surprise. I'm also very excited for it, so I'll be reading through a lot of the news articles about the changes in Windows 7 as they come out. Microsoft's Steve Ballmer is at the heart of a lot of those changes and I think that's one of the reasons why I wanted to try to write a blog about it. According to Steven Sinofsky, the

engineering vice president at Microsoft and a key figure in the creation of Windows 7, the changes in Windows 7 are absolutely vast.

"Over the last two years, the team made the decision to not continue to release incremental changes,"

Sinofsky told software developers at the company's Professional Developer Conference in Seattle on Monday. "The reason was it didn't enable the kind of experiences that users wanted." That meant the company needed to make a number

of fundamental changes in the new operating system. Sinofsky was talking about Windows 7 for Developers, a version of the OS specifically geared for software developers and included on the same disk as Windows 7 Home. "We decided that we really wanted to deliver this fundamental change," he said. "We wanted to deliver a new kind of Windows. We called it the 'Ultimate Windows 7.' And the developers and testers all gave the thumbs up." So what is this 'new

kind of Windows'? According to Sinofsky it is "a very different Windows in a number of dimensions." For one thing, Microsoft is bringing back the Start menu. "There is no Start Menu in Windows 7," Sinofsky said. "There is no Start Menu in Windows 7." So that's a huge change from the days of the Start Menu in Windows 95, Windows 98,
