Overall, Lightroom 5 is a step further along a road worth traveling. I just wish it was more intuitive and performed better. Don't expect miracles yet. Lightroom 5 Beta is available for both the new Mac and Windows operating systems. I do believe there are some major innovations in Lightroom 5, even though the early beta release doesn't seem to have some of the finer points. Lightroom beta 1 has been out for a while and it does seem to be stable. Despite all of my criticism, the product is an intelligent and very fast and pleasant tool that should please many photographers. The retention of 30,000 images is surprising given that we now believe (through the recent admission by Giegling) that Lightroom is not meant to work the way Auto Repair 2007 works and that product is ineffective - even though Giegling stated that Lightroom will stay put with its 30,000 mbs database. The only way to use Lightroom effectively is to keep the number of images in the database relatively low and it seems to take a good deal of the fun out of this powerful imaging tool.
